

REMOTE TANK LEVEL MONITORING

Eliminate or reduce operational blind spots and receive necessary data to make immediate decisions. No programming needed. Simply plug in and create logins and you are up and running.

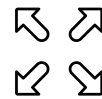

In remote locations it's often difficult to manage tank levels whether they are on a production facility or a large agriculture environment. Great distances between tanks typically challenge regular level monitoring, damage or other issue.

Eliminating the risk of depletion, usage trends, or other malfunctions save cost, down-time, maintenance and risk of loss or damage to assets.

FreeWave offers a complete, true plug-and-play solution to bring visibility to tank level health and the ability to monitor and manage tank levels from any location, globally.

With telemetry backhaul, sensors, and access to network health, alarms, alerts and visualization with the FreeWave data platform you can now act as quickly as needed. The solution is also scalable so you can add sensors as needed. And, with unmatched customer support, you get the peace of mind that comes with the FreeWave experience.

THE FREEWAVE DIFFERENCE

A complete true plug-and-play solution allows immediate access to the data you've been missing

The ability to see and react to trends is accessible through the FreeWave data platform. Create customized dashboards or view historic data in numeric tables.

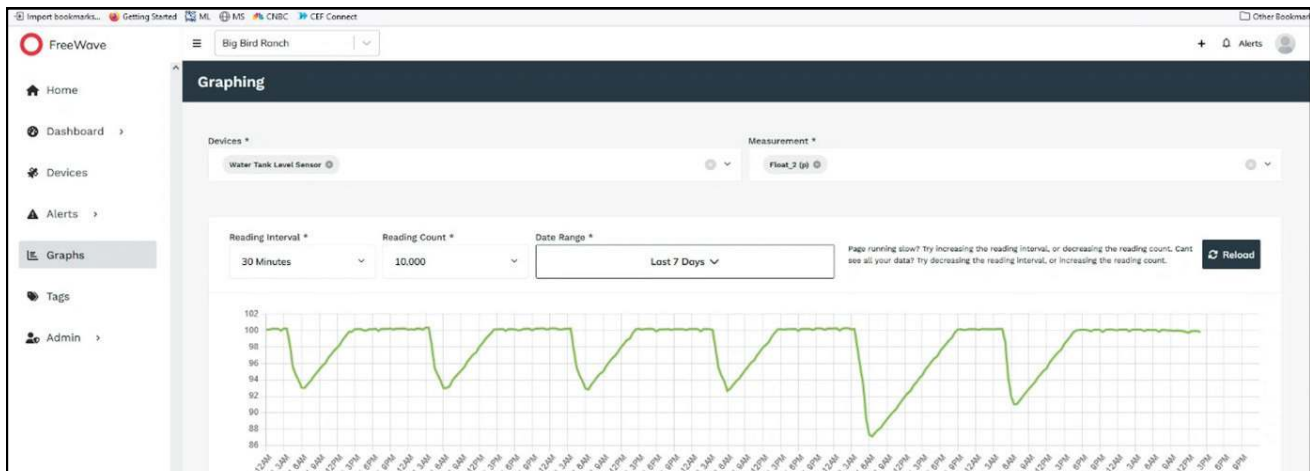

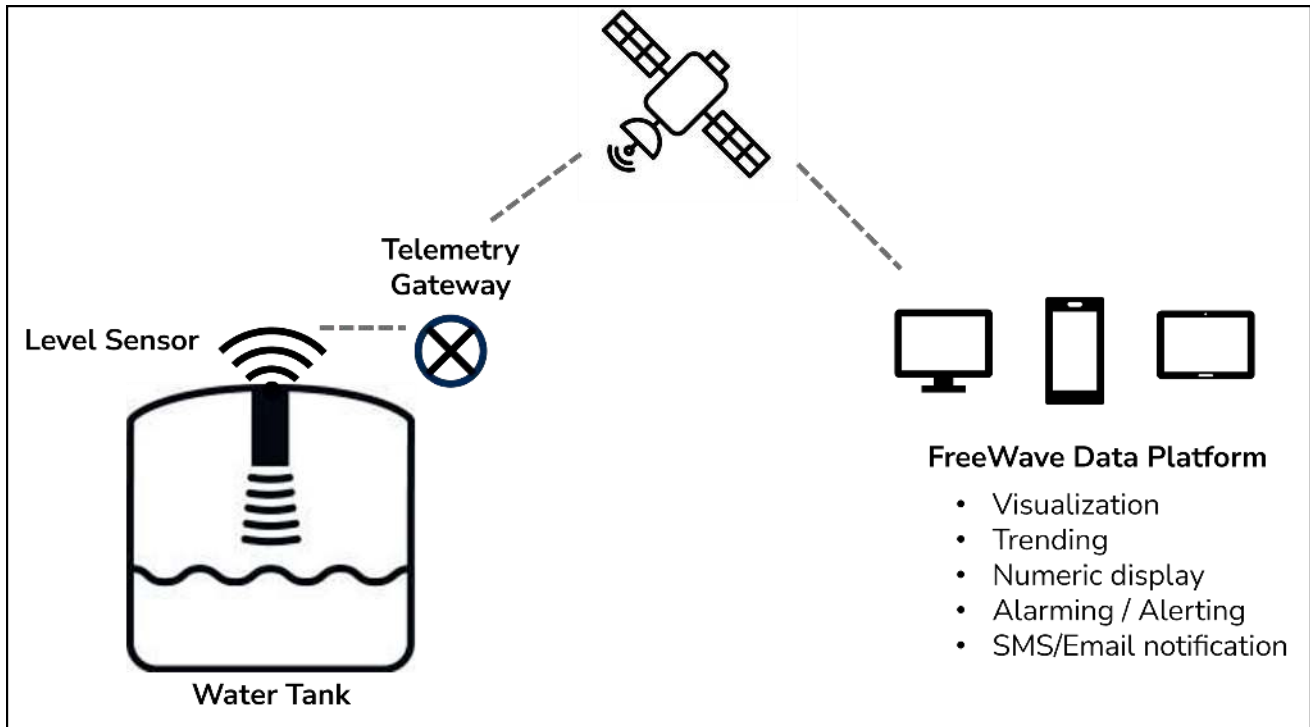

Managing and monitoring from anywhere with the ability to create alerts and alarms for any situation.

Unsurpassed FreeWave support is there for you when you need it, no matter the size of the issue. We stand by you throughout the life of your network.

- **Complete plug-and-play monitor and control solution from telemetry backhaul, sensor, data portal, and notifications**
- **Ability to remotely manage the devices and data, anywhere**
- **Scale on the edge by adding or relocating sensors when needed**

THE FREEWAVE SOLUTION

IDEAL FOR USE IN THESE ENVIRONMENTS

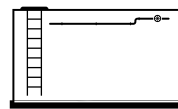

Storage management

Storage management

Delivery & Inventory management

Waste liquid collection
